

ACF (Advanced Custom Fields) – Teaching Material

Beginner-Friendly, No Coding Required

1. What Is ACF?

ACF is a WordPress plugin that allows you to add extra input fields to posts, pages, and custom post types. It helps create structured content visually without writing code.

2. What Can ACF Be Used For?

Examples:

- Add subtitles to blog posts
- Add phone numbers to team members
- Add portfolio galleries
- Add opening hours to businesses
- Add prices and product details

3. Installing ACF

1. Go to Plugins → Add New
2. Search for 'Advanced Custom Fields'
3. Install and activate it

4. Understanding Field Groups

A Field Group is a container for multiple custom fields. You attach this group to a post type so the fields appear when editing content.

5. Creating a Field Group

Steps:

1. Go to Custom Fields → Add New
2. Name your group

3. Add fields (Text, Image, etc.)
4. Set Location Rules (e.g., Post Type = Page)
5. Publish

6. Student Exercise

Create 'Business Info' with fields: Owner Name, Opening Hours, Featured Photo, Website URL. Assign it to Pages.

7. Most Useful Field Types

- Text
- Textarea
- Number
- URL
- Checkbox
- Select
- Image
- Gallery
- WYSIWYG

8. Displaying ACF Fields Without Coding

Use ACF with:

- Elementor
- Bricks Builder
- Beaver Builder
- ACF Block (Pro)
- Gutenberg dynamic content blocks

9. Using ACF with Gutenberg

You can map ACF values into blocks using dynamic fields inside blocks such as Heading, Paragraph, or Buttons.

10. Mini Project

Build a Team Members section using ACF fields: Name, Job Title, Image, Bio.

11. Quick Quiz

1. What is a Field Group?
2. Which field type stores multiple images?
3. Can ACF work with page builders?
4. What field type stores website links?
5. Where do you set where fields appear?

12. Homework

Create a 'Product Details' field group with: Price, Gallery, In Stock (true/false), Product Manual. Assign it to Posts.
